San Francisco, CA | +1 5102241232 | princewill.egbujor@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data Scientist with specialized experience in digital marketing and product analytics. Skilled in building robust ETL pipelines and statistical models to measure brand relevancy, consumer sentiment, and marketing impact. Developed AI-driven reporting solutions and interactive dashboards that optimize user acquisition and brand investment. Passionate about leveraging data to inform strategic marketing decisions.

CORE SKILLS & COMPETENCIES

- **Marketing Analytics:** Brand Relevancy, Causal Inference, Digital Marketing Analytics, Customer Segmentation, Attribution Modeling, Predictive LTV Modeling, Marketing Mix Modeling, Stakeholder Management, CRM Systems
- **Data Science & NLP:** Sentiment Analysis, Statistical Modeling, Regression, Classification, LLMs, Structural Equation Modeling, AI
- **Data Engineering & Cloud:** Python, SQL, PySpark, PostgreSQL, Databricks, Azure, AWS, GCP, Langchain, Langgraph, ETL Pipelines, Data Pipeline Development, Airflow, Cloud Data Warehouse, BigQuery, Testing Frameworks
- **Visualization:** Tableau, PowerBI, Plotly, Streamlit, Data Storytelling

WORK EXPERIENCE

Apple (Contract via Magnit Global)

Jan 2025 - Present

Senior Data Scientist

Cupertino, CA

- Led brand relevancy and marketing ecosystem measurement initiatives, developing ETL pipelines to ingest cross-channel marketing data and quantify the link between marketing and business impact across Apple Services platforms.
- Designed and implemented statistical marketing measurement models to assess the true impact of organic channels, replacing manual attribution with a robust framework for budget allocation decisions.
- Built a Structural Equation Model for content taxonomy and attribution analysis, limiting A/B test costs while improving targeted marketing efficiency.
- Designed intuitive Tableau dashboards fed by a cloud data warehouse, enabling non-technical stakeholders to track social brand health metrics in real time.
- Built a testing framework to automate data quality checks and validate measurement outputs across multiple marketing channels.

MyPOP.ai

Jul 2024 - Dec 2024

GenAI Data Scientist

San Francisco, CA

- Architected multi-agent systems using Langchain and Langgraph, improving recommendation accuracy through a 'better, faster, cheaper' optimization framework.
- Deployed a RAG service on Azure AI Studio using Azure Cognitive Search, reducing error rates by 30% through efficient document retrieval and similarity scoring.
- Redesigned single LLM pipelines into scalable multi-agent workflows, enhancing team-specific recommendation quality.
- Collaborated cross-functionally to automate data processing pipelines and optimize reliability of agentic systems.

TruckX Inc

Oct 2023 - Jul 2024

Data Scientist, Product

San Jose, CA

- Led product experimentation strategy, implementing A/B tests that improved app engagement by 200% through feature optimization.
- Engineered an end-to-end analytics pipeline for sharp turn detection using SQL and Python, yielding a 40% improvement in route optimization.
- Implemented geospatial data solutions on Azure, enhancing operational efficiency through intelligent geofence algorithms.

Dangote Industries Limited (DIL)

Mar 2016 - Jul 2023

Senior Data Analyst

Lagos, Nigeria

- Developed predictive CLV analysis framework using RFM metrics, increasing customer retention by 8%.
- Built ML-powered churn prediction model with XGBoost, achieving 92% accuracy in identifying at-risk customers.
- Designed customer segmentation models using K-means clustering, driving a 17% improvement in targeted marketing efficiency.
- Developed Python/SQL-based People Analytics Platform enhancing HR decision-making for 4,000+ personnel.
- Created interactive Plotly & PowerBI dashboards for real-time monitoring of customer behavior and segment performance.

EDUCATION

University of San Francisco

Jun 2024

M.S., Data Science

San Francisco, CA

OTHER PROJECTS

Customer Lifetime Value Analysis [GitHub](#)

- Conducted RFM segmentation using SQL and Python to profile customer behavior and spending patterns, informing targeted marketing strategies
- Built a predictive LTV model in Python on BigQuery datasets and automated ETL pipelines with Airflow to enable early optimization of acquisition campaigns

Energy Demand Forecast [GitHub](#)

- Implemented time series forecasting models (ARIMA, Prophet) in Python on Databricks to predict global active power demand

Article Recommendation Engine [Live Demo](#)

- NLP project using Sentence Embedding (SBERT).
